**Meeting 3 - March 16, 2022**
- John said it's a good capture of the data piece they're looking for
- Our Hifi does a good job highlighting the difference between a self-service person and a person calling
- Identification like Driver's License, Health Card aren't going to be stored anywhere. They're only used to confirm that the person who's picking it up is the person who ordered it [what we could do is have a note that they need identification in order to get their hamper]
- Said the income amount is shown as a fillable field; however, it is forced skipped [users don't need to enter a value for this]
- Likes the Calendar selections
- We raised a good point about combining dietary restrictions. This would need to be figured out internally first before we can do something like this in the project.
